Empathy Map Canvas: Software Installation Request Automation

User: Employee Requesting Software Installation

Says

- I need software to complete my work.
- I want my request approved quickly.
- I need to know the status of my request.
- The process should be simple and easy to use.

Thinks

- Will my request be approved?
- How long will the installation take?
- Is the software license available?
- Can I track my request without contacting IT?

Does

- Logs into the ServiceNow Service Portal.
- Searches for the Software Installation Request form.
- Enters software details and business justification.
- Submits the request.
- Monitors request status and notifications.

Feels

- Frustrated by delays and manual processes.
- Concerned about approval timelines.
- Confused when there is no visibility into request progress.
- Satisfied when requests are processed quickly.
- Confident when updates are provided automatically.

Pain Points

- Manual email-based software requests.
- Delayed approvals and installations.
- Lack of request tracking.
- Incomplete communication between users and IT teams.
- Difficulty understanding licensing requirements.

Gains

- Easy self-service software request process.
- Faster approvals and fulfilment.
- Real-time request tracking.
- Automated notifications.
- Improved transparency and user experience.

Solution

The Software Installation Request Automation solution uses ServiceNow Service Catalog, Workflow Automation, and Business Rules to automate request submission, approvals, task creation, fulfilment, and closure. This reduces manual effort, improves efficiency, and enhances the overall employee experience.

Software Installation Request through catalog
