

Project Design Phase
Proposed Solution Template

Date	25 June 2026
Team ID	
Project Name	An employee requests installation of licensed software through the Service Catalog
Maximum Marks	2 Marks

Proposed Solution:

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Organizations often rely on manual methods such as emails or paper-based requests for software installation. This leads to delayed approvals, inefficient task assignment, poor request tracking, and lack of transparency for employees and IT teams.
2	Idea / Solution Description	Develop a Software Installation Request Automation system using ServiceNow Service Catalog, Workflow Editor, and Flow Designer. Employees can submit software requests through a self-service portal, while the system automatically validates inputs, routes requests for approvals, creates catalog tasks, sends notifications, tracks request status, and manages fulfilment until completion.
3	Novelty / Uniqueness	The solution integrates Service Catalog, automated workflows, UI Policies, approval mechanisms, and catalog task generation into a single platform. It reduces manual intervention, provides real-time request tracking, and ensures standardized software request processing using ServiceNow's out-of-the-box capabilities.
4	Social Impact / Customer Satisfaction	Employees benefit from a faster, transparent, and user-friendly request process with automated notifications and real-time status tracking. IT teams experience reduced manual workload, improved efficiency, and consistent service delivery, resulting in higher customer satisfaction.
5	Business Model (Revenue Model)	The solution can be adopted by organizations using the ServiceNow platform as part of their IT Service Management (ITSM) implementation. It helps reduce operational costs by automating repetitive software request processes and improving IT service efficiency.
6	Scalability of the Solution	The solution is highly scalable and can be extended to automate additional IT services such as hardware requests, access requests, VPN provisioning, software license management, and employee onboarding by configuring new catalog items, workflows, and approval processes within ServiceNow.
