

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	31 January 2025
Team ID	
Project Name	An employee requests installation of licensed software through the Service Catalog
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Software Request Submission	• Submit software installation request through the Service Catalog. • Enter Software Name, Version Required, Business Justification, and Urgency.
FR-2	Request Validation	• Validate mandatory fields before submission. • Display dynamic fields using UI Policies and help text.
FR-3	Workflow & Approval Automation	• Automatically initiate the software request workflow. • Create catalog tasks for the Software Support Team. • Send approval and notification emails to users and approvers.
FR-4	Request Fulfillment & Tracking	• Assign fulfillment tasks to the IT Software Support Team. • Track request status across REQ, RITM, and SCTASK tables. • Notify users when the software installation request is completed.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Provide a user-friendly Service Portal interface with intuitive forms, clear navigation, and easy software request submission.

NFR-2	Security	Implement role-based access control (RBAC), authenticated user access, workflow approvals, and field validations to ensure secure request processing.
NFR-3	Reliability	Ensure accurate and consistent processing of software requests through automated workflows, catalog task creation, and notification mechanisms without data loss.
NFR-4	Performance	Optimize request processing using ServiceNow workflow automation, efficient database operations, and minimal response time for users.
NFR-5	Availability	Deploy the solution on the ServiceNow cloud platform to provide high availability, continuous access, and reliable service for all users.
NFR-6	Scalability	Design the application to support additional catalog items, workflows, approval processes, and future IT service requests with minimal configuration changes.
